### **Dornier MedTech Launches World's First Smart Lithotripter Using Big Data at American Urology Association Annual Meeting**

***-- Dornier Delta® III SmartLitho™ offers analytic algorithm to help urologists make evidence-based treatment decisions***

**San Francisco, 18 May 2018** – Dornier MedTech (Dornier), a global leader in innovative kidney stone management, today announced the launch of Dornier Delta® III SmartLitho™, the world's first lithotripter system which uses big data in urology, at the American Urology Association (AUA) Annual Meeting 2018.

The new Dornier Delta® III SmartLitho™ can utilize Dornier's proprietary analytic algorithm, which is able to provide real world data from extracorporeal shockwave lithotripsy (ESWL) treatments of urological stones by validating against a broad set of data points collected globally. The novel algorithm enables urologists to make personalized, evidence-based decisions by assessing historical success rates of treatment modalities as well as identify and balance costs.

**Abel Ang, President and CEO of Dornier MedTech said:** *“As a global leader in innovative kidney stone management, we are excited to be the first in the world to roll out a feature for ESWL users that uses the power of big data and analytics.*

*“Using Dornier's data driven technology, urologists using our best-selling lithotripter now have access to a broad range of clinical data points and information to make evidence-based medical decisions. This ultimately can lead to more efficient healthcare delivery and better patient outcomes.”*

About 1 in 11 Americans will have a kidney stone at some point in their lifetime, with more than 50% of patients experiencing one or more recurrences. The prevalence of stone diseases doubled over the last 15 years and cost the US health system US\$10 billion per year.<sup>i,ii</sup>

Dornier MedTech will exhibit the new Dornier Delta III SmartLitho™ at booth 1645 at AUA 2018.
